Nutrition Sales & Objection Scripts

The 8 Conversations That Close Nutrition Coaching Clients

EvoFit Meals

25 Conversations That Close Nutrition Coaching Clients at Every Level — From Individual Prospects to Corporate Contracts

Why Scripts Matter for Nutrition Sales

Selling nutrition coaching is harder than selling training sessions. With training, the client can see the gym, feel the workout, and picture themselves getting stronger. Nutrition is invisible. The results are slower. The resistance is deeper — because food is emotional, personal, and tangled up with identity, family, and years of failed diets.

At the enterprise level, the challenge compounds. You are not just selling to individuals anymore. You are selling to gym owners, studio directors, corporate wellness managers, school boards, insurance companies, and franchisees. Each audience has different objections, different decision-making processes, and different definitions of value. A script that closes a one-on-one training client will fall flat with a corporate wellness director evaluating your nutrition program against three competing proposals.

That is exactly why you need frameworks for these conversations. Not word-for-word scripts you recite like a robot, but proven structures that help you navigate the most common pushback without losing your footing. Every script in this guide follows the same pattern:

- ☐ **1. Acknowledge** — Show them you genuinely heard the concern. Never dismiss it.
- ☐ **2. Reframe** — Shift the conversation from their past experience to your unique approach.
- ☐ **3. Bridge** — Connect back to the specific health, body composition, or business goal they told you about.
- ☐ **4. Close or Advance** — Ask for the commitment, or set a concrete next step.

One more thing: this is not about pressure selling. Nutrition coaching only works when the client trusts you and opts in willingly. Your job in these conversations is to remove confusion, address real concerns, and help them make a decision that serves their goals. If the answer is genuinely no, let it be no — and leave the door open. The best nutrition clients often come back two months later when the thing they tried instead didn't work.

This enterprise edition includes all 25 scripts organized into three sections: individual prospect objections (Scripts 1-8), professional client scenarios (Scripts 9-15), and enterprise and institutional conversations (Scripts 16-25). If you are a gym owner managing a team of nutrition coaches, these scripts should be distributed to your entire coaching staff. Every coach on your team should know Scripts 1-15 cold. Scripts 16-25 are for your sales leadership — the people pitching partnerships, corporate contracts, and institutional programs.

Part 1: Individual Prospect Objections (Scripts 1-8)

Script 1: "I Can Meal Prep Myself"

Why they say this: They think nutrition coaching is just someone handing them recipes. They have watched meal prep videos on YouTube, bought containers from Amazon, and maybe even had a good run for two or three weeks. They genuinely believe the only thing standing between them and results is a collection of recipes — and they can find those for free. What they don't see is the difference between having recipes and having a system that adapts to their life week after week. **The Reframe:** Recipes are ingredients — a nutrition system is the architecture that makes those ingredients work for your body, your schedule, and your goals consistently. **The Script:**

Client: "I appreciate the offer, but honestly I can just meal prep on my own. There are tons of recipes online."

>

You: "You're absolutely right — there are thousands of great recipes out there. And I'd bet you've probably tried meal prepping before, yeah?"

>

Client: "Yeah, I've done it a few times. It went well for a couple weeks."

>

You: "That's really common. Here's what I've noticed with almost every client I work with: the recipes were never the problem. The problem is what happens in week three when you're bored of chicken and rice, your schedule shifts, you eat out twice unexpectedly, and suddenly the whole plan falls apart. Does that sound familiar?"

>

Client: "Yeah, actually. That's pretty much what happens."

>

You: "That's exactly what I solve. I don't just hand you a list of meals. I build a system around your life — your schedule, your preferences, your training days versus rest days, even what your family eats. And when things go sideways — because they always do — I adjust the plan in real time instead of

Script 2: "Diets Don't Work for Me"

Why they say this: This one carries emotional weight. They have tried keto, paleo, Whole30, calorie counting, intermittent fasting — maybe all of them. Each time they lost weight, regained it, and ended up feeling worse than before. They are not just skeptical of your program. They are skeptical of themselves. The repeated failure has convinced them that their body is somehow different, that they are the exception. What they need to hear is that the diets failed them, not the other way around. **The Reframe:** Diets are temporary restrictions with expiration dates — nutrition coaching is a permanent skill set that adapts with you. **The Script:**

Client: "Look, I've tried every diet out there. Nothing sticks. I don't think diets work for me."

>

You: "Can I be honest? I actually agree with you. Diets don't work — not for you, not for most people. And that's not because something is wrong with you. It's because diets are designed to be temporary. They give you rigid rules, you white-knuckle through them for a few weeks, and the second real life shows up, the whole thing collapses."

>

Client: "That's exactly what happens every time."

>

You: "Right. So here's what's different about what I do: I'm not putting you on a diet. There's no food you can't eat. No phase one, phase two nonsense. What I build is a flexible nutrition framework around your actual life — your training schedule, your preferences, the foods you love, even the meals you eat out. We adjust it as we go based on how your body responds and what your week looks like."

>

You: "Every plan is customized to your macros and your goals, and the system has dietary filters for literally any restriction or preference. So if you hate broccoli, broccoli is gone. If you love pasta, we work pasta in. The reason those other diets failed is because they asked you to live someone else's life. I'm building nutrition around yours."

>

Script 3: "I Already Know What to Eat"

Why they say this: They probably do know, at least in broad strokes. Lean protein, vegetables, whole grains, less sugar — the basics are not a mystery. But there is a canyon between knowing what to eat and consistently eating it in the right amounts, at the right times, adjusted for training days, recovery, and real-life chaos. This objection is really about pride — they don't want to admit that knowledge alone hasn't been enough. **The Reframe:** Everyone knows what to eat. The gap between knowing and doing is where nutrition coaching lives. **The Script:**

Client: "I appreciate it, but I already know what I should be eating. I just need to be more disciplined."

>

You: "I believe you. Honestly, most of my clients knew exactly what to eat before they started working with me. That wasn't what was missing."

>

Client: "So what was missing?"

>

You: "Execution. Structure. Accountability. Knowing that chicken and vegetables is a good dinner doesn't help you at 6 PM on a Wednesday when you're exhausted, the kids are hungry, and the easiest option is ordering takeout. What helps is having a plan already built for that exact scenario — a 20-minute meal that fits your macros, uses ingredients you bought on Sunday, and feeds the whole household."

>

You: "That's what I build. Not education — implementation. Your plan is customized, it adjusts to your training schedule, and when life throws a curveball, we pivot the plan instead of abandoning it. Plus, I'm tracking your progress and adjusting your nutrition targets as your body changes. That's the piece that discipline alone can't replace."

>

You: "Think of it this way: you know how to exercise too, but having a structured training program still makes a difference, right? Nutrition is the same. Knowing isn't the bottleneck — having a system is

Script 4: "It's Too Expensive on Top of Training"

Why they say this: This is a real concern for most clients. They are already paying for training sessions, and now you are suggesting they add nutrition coaching on top. It feels like the bill is stacking up. What they need to understand is that nutrition isn't an add-on — it's the multiplier that makes their training investment actually pay off. Without it, they are leaving 70% of their results on the table. **The Reframe:** Nutrition coaching doesn't add to your training cost — it multiplies the return on the investment you're already making. **The Script:**

Client: "I'm already paying for training. Adding nutrition on top feels like a lot."

>

You: "I totally understand that. You're already making a real investment in your health, and I respect that. Can I share something that might reframe this?"

>

Client: "Sure."

>

You: "You've probably heard the saying that results are 70% nutrition and 30% training. I don't know if those exact numbers are right, but directionally it's true — you cannot out-train a poor diet. Right now, you're investing in the 30%. The training is working. Your form is improving, you're getting stronger. But if the nutrition isn't dialled in, you're paying full price for 30% of the results."

>

You: "Adding nutrition coaching doesn't double your cost — it completes the equation. It's the difference between working hard in the gym and actually seeing the body composition changes you're training for. Most of my clients who add nutrition see more visible progress in the first month than they saw in the previous three months of training alone."

>

You: "And here's the thing — the meal plans are fully built for you through the platform. Customized to your macros, your dietary preferences, your schedule. You're not paying for generic PDFs. You're getting a system that runs alongside your training program and makes every session count. Want me

Script 5: "My Partner/Family Won't Eat That"

Why they say this: This is a logistics concern disguised as an objection. They are imagining having to cook two separate meals every night — one "diet meal" for themselves and one "normal meal" for the family. They have probably tried this before with a restrictive diet and it was unsustainable. What they need to know is that a well-designed nutrition plan doesn't require a separate kitchen. It fits into the household. **The Reframe:** A good nutrition plan doesn't isolate you at dinner — it feeds the whole table while still hitting your targets. **The Script:**

Client: "The problem is my family. My husband won't eat 'diet food' and my kids are picky. I'd have to cook two meals every night."

>

You: "That's one of the most common concerns I hear, and it's completely valid. Cooking two separate meals every night is a non-starter — nobody can sustain that."

>

Client: "Exactly. That's why every diet I've tried falls apart."

>

You: "Here's the thing — I don't build meal plans that require you to eat in isolation. The platform has over 6,000 recipes, and a huge portion of them are family-friendly meals that your husband and kids will actually eat. We're talking things like taco bowls, stir-fries, pasta dishes, sheet-pan dinners — real food that happens to be portioned and balanced for your goals."

>

You: "The difference is in the portions and maybe a side swap. Your family gets the full meal. You get the same meal, portioned to your macros, maybe with extra vegetables instead of a second helping of rice. Same dinner table. Same food. No separate cooking required."

>

You: "I also build plans that account for the nights your family does takeout or eats something that doesn't fit your targets. We plan around those nights instead of pretending they won't happen. Want me to pull up some of the family-friendly recipes so you can see what I mean?"

Script 6: "I Travel Too Much for a Meal Plan"

Why they say this: They are picturing a rigid meal plan that requires them to be in their kitchen with specific ingredients at specific times. Since they are on the road, in hotels, or eating out frequently, they have written off structured nutrition as incompatible with their lifestyle. What they don't realize is that a good nutrition system is designed for exactly this kind of unpredictability. **The Reframe:** A nutrition plan that only works in your kitchen isn't a plan — it's a fantasy. Real plans travel with you. **The Script:**

Client: "I'm on the road three or four days a week. A meal plan just isn't realistic for my lifestyle."

>

You: "How many days a week are you actually at home with access to your own kitchen?"

>

Client: "Maybe three or four, depending on the week."

>

You: "Perfect. So here's what I'd build: for the days you're home, you get structured meal plans — prepped, portioned, optimized for your goals. For the days you're traveling, I build a flexible framework: restaurant guidelines, fast-casual go-to orders, hotel room meal options, and macro targets you can hit with what's available wherever you are."

>

You: "The platform lets me set up different day templates — home days and travel days — so your plan adapts to your actual week instead of pretending every day looks the same. I also include travel-friendly meal options that require zero cooking. Some of my busiest clients are travelers, and they see the best results because we've built a system that accounts for the chaos instead of ignoring it."

>

You: "The biggest mistake people make with nutrition is assuming it only works under perfect conditions. I build plans for real conditions — your conditions. Want me to map out what a typical travel week would look like?"

Script 7: "I'll Start Monday" / "After the Holidays"

Why they say this: This is a delay tactic, and it usually comes from one of two places: fear of commitment or the belief that they need a perfect starting condition. They are waiting for a Monday, a new month, the end of a vacation, post-holidays, after the birthday party — there is always something. The reality is that there will never be a clean starting line. The perfect time doesn't exist, and every week they wait is a week of results they won't get back. **The Reframe:** There's no perfect Monday. The best nutrition plan starts in the middle of the mess — because that's where real life happens. **The Script:**

Client: "I love this, but the timing isn't great. Let me start after the holidays. I'll reach out in January."

>

You: "I hear you. And honestly, that instinct makes total sense — start fresh, clean slate, new year energy. Can I push back just a little bit?"

>

Client: "Sure."

>

You: "The holidays are actually the perfect time to start. Not because I want you counting macros at Christmas dinner — that's not what this is. But because the clients who learn to navigate holidays, travel, parties, and social eating with a flexible plan are the ones who never fall off. If your nutrition system only works when life is calm and predictable, it's not a system. It's a fair-weather plan."

>

You: "Here's what I'd do: we start now with a flexible framework. Through the holidays, the goal isn't perfection — it's building the skill of making better choices without restricting yourself. By January, while everyone else is starting from scratch, you'll already have momentum, habits, and a system that works."

>

You: "Every week you wait is a week you could have been making progress. And I promise, there will

Script 8: "I Have Too Many Restrictions/Allergies"

Why they say this: They have had bad experiences with generic meal plans that ignore their dietary needs. Maybe they are celiac, lactose intolerant, vegetarian, or managing multiple food sensitivities. They have received plans before that were useless on day one because half the meals contained foods they can't eat. They assume your system will be the same — one-size-fits-all with no room for their complexity. **The Reframe:** Your restrictions aren't a problem to work around — they're the blueprint I use to build your plan. **The Script:**

Client: "I don't think this would work for me. I'm gluten-free, dairy-free, and I can't have soy. Every meal plan I've tried ignores at least one of those."

>

You: "That's incredibly frustrating. Let me guess — you've gotten plans where you had to substitute half the meals yourself, which basically meant the plan was useless?"

>

Client: "Yes. Every single time."

>

You: "That won't happen here. The system I use has built-in dietary filters for every restriction you just named — and dozens more. When I build your plan, gluten, dairy, and soy are excluded before I even start selecting recipes. Every single meal in your plan will be safe for you from day one. No substitutions required."

>

You: "The platform has over 6,000 recipes across every dietary category you can think of: gluten-free, dairy-free, soy-free, nut-free, vegan, keto, paleo — and combinations of all of them. Your restrictions actually make my job more focused, not harder. I'm not trying to fit you into a template. I'm building a template around you."

>

You: "On top of that, if you have a reaction to something or discover a new sensitivity, I update the plan immediately. No waiting for next month's meal plan. We adjust it that day. Want me to show you

Part 2: Professional Client Scenarios (Scripts 9-15)

Script 9: Upselling Training Clients to Nutrition Add-Ons

Context: You have a training client who has been with you for 3+ months. They are getting results from training but their nutrition is clearly the limiting factor. They have never asked about nutrition services, but you can see the gap. **The Script:**

You: "Hey [Name], I want to bring something up that I've been thinking about. Your training consistency is excellent — you haven't missed a session in six weeks. But I'm noticing that your body composition changes aren't matching your effort level. I think I know why."

>

Client: "Yeah, I've been wondering about that too."

>

You: "It's the nutrition side. You're sending your body the right signals through training — 'build muscle, burn fat, get stronger.' But your body needs specific raw materials to respond to those signals. Without the right nutrition framework, your body is hearing the signal but doesn't have what it needs to follow through."

>

You: "I've started offering integrated nutrition coaching for my training clients. I build a meal plan that syncs with your training program — higher carb on heavy training days, adjusted macros during recovery weeks, pre-workout and post-workout meal timing that maximizes what we're doing in the gym. It's not a separate service — it's the other half of what we're already doing."

>

You: "The investment is $[X]/month on top of your training. That includes a fully customized weekly plan through EvoFit Meals, adjustments based on your progress, and a monthly nutrition check-in. Based on where you're at and what we've built in training, I think you'd see more visible change in the next 30 days than the last 90. Want to try it for a month?"

If they hesitate: "How about this — let me build you a free 3-day sample plan based on your current training program. You try it, see how it feels, and if you like it, we'll set up the full service."

Script 10: The High-Value Client Close (Premium Pricing)

Context: A prospect has expressed interest in your most comprehensive nutrition package. They have the budget — this is about demonstrating the value that justifies premium pricing. **The Script:**

> **You:** "Based on what you've told me about your goals and your lifestyle, I'd recommend my Premium Nutrition Coaching. Let me walk you through exactly what that looks like."

>

> **You:** "Every week, you'll receive a fully customized meal plan built around your macros, your food preferences, your training schedule, and your real-life commitments. We're talking restaurant-quality recipes — not bodybuilder food. Each plan comes with a complete grocery list, prep instructions, and detailed nutritional breakdowns."

>

> **You:** "But the plan is just the foundation. What makes this premium is the coaching layer. We check in weekly — not monthly. I review your adherence, your progress photos, your energy levels, and your feedback. If something isn't working by Tuesday, we fix it by Wednesday. You also get direct messaging access to me — when you're standing in a restaurant looking at a menu, you can text me a photo and I'll tell you what to order."

>

> **You:** "The investment is $[X]/month. That's higher than a basic meal plan service, and here's why: basic services hand you a PDF and disappear. I'm building a living, breathing nutrition system that evolves with you every week. My average premium client stays for 9 months and achieves results they genuinely didn't believe were possible in the first consultation. The ROI isn't just physical — it's the time you save, the mental energy you reclaim, and the confidence that comes from knowing your nutrition is handled."

>

> **You:** "Are you ready to get started?"

If they ask about cheaper options: "I do offer a standard monthly plan at $[X]. It includes bi-weekly plans and monthly check-ins. It's a great service. But based on the speed and specificity of results you described wanting, the premium coaching is what's

Script 11: Nutrition Challenge Enrollment

Context: You are running a 4-week or 8-week nutrition challenge as a lead generation and revenue tool. You need to enroll participants and set expectations. **The Script:**

You: "I'm launching a [4/8]-week Nutrition Challenge starting [date], and I think you'd be a perfect fit. Here's the deal."

>

You: "This isn't a crash diet or a detox. It's a structured challenge where I build each participant a customized meal plan, we check in weekly as a group, and everyone tracks their progress toward a personal goal. The challenge creates accountability — you're not doing this alone. There are [X] people already signed up, and the energy in a group setting is completely different from going solo."

>

You: "Every participant gets a personalized plan through EvoFit Meals tailored to their goals and restrictions. We have a private group for daily check-ins, recipe sharing, and support. I do a live coaching call every week where we troubleshoot, swap recipes, and celebrate wins. At the end, we measure results and the top [3] transformations get [prize/incentive]."

>

You: "The challenge costs $[X] for the full [4/8] weeks. That includes everything — your custom plan, weekly updates, group support, and the coaching calls. Most participants go on to become monthly nutrition clients because they experience firsthand what structured nutrition coaching actually delivers."

>

You: "We have [X] spots left. Want me to hold one for you?"

Script 12: Converting Free Consultation to Paid Client

Context: You offered a free 15-minute nutrition consultation as a lead magnet. The prospect attended and is interested but hasn't committed. You need to bridge from free value to paid enrollment. **The Script:**

You: "Now that I've seen your current eating patterns and heard your goals, I want to tell you exactly what I'd build for you if we worked together."

>

You: "Your protein is significantly below what you need for your training volume — you're at roughly [X]g and you need closer to [Y]g. Your carb timing is working against your energy levels because most of your carbs are at dinner when you need them earlier in the day around your workouts. And there are about [Z] meals per week where you're defaulting to convenience food because there's no plan in place."

>

You: "None of this is a criticism — it's data. And here's what the data tells me: with the right meal plan and a few structural changes, you're going to feel different within a week and look different within four. That's not a promise — it's what I see consistently when clients go from unstructured eating to a system that matches their goals."

>

You: "My monthly nutrition coaching is $[X]. You'll get your first customized plan within 48 hours of signing up, and we'll review it together before you start. Ready?"

Script 13: Handling "Let Me Talk to My Spouse"

Context: A common stall tactic that sometimes reflects a genuine need to discuss finances with a partner. Your job is to equip them to have that conversation successfully.
The Script:

Client: "This sounds great, but I need to talk to my spouse first."

>

You: "Absolutely — that's the right thing to do. Can I give you a couple of points that might help when you have that conversation?"

>

Client: "Sure."

>

You: "The first thing to mention is what you'd actually be getting: a fully customized meal plan every week with recipes, shopping lists, and macro breakdowns — all tailored to your goals. It's not a generic PDF from the internet. Second, the plans are designed to be family-friendly. Your spouse and kids eat the same meals — the only difference is your portions are dialed in. So this actually makes dinner easier for the whole household, not harder."

>

You: "And the investment is $[X]/month. If it helps, the cost per day is about $[Y] — less than a drive-through lunch. What you're really paying for is not having to think about what to eat, having a professional adjust your nutrition as your body changes, and finally getting the results that training alone hasn't delivered."

>

You: "When do you think you'll have a chance to talk it over? I'd love to follow up [specific day] so we don't lose momentum."

Script 14: Renewing an Expiring Client

Context: A client's commitment period is ending. You need to have the renewal conversation before they decide to leave. **The Script:**

You: "Before we wrap up today, I want to talk about what's next. Your current plan runs through [date], and I've been reviewing your progress to figure out the best path forward."

>

You: "When you started, you were [starting point — specific data]. Today, you're [current point — specific data]. That's [specific improvement] in [timeframe]. Here's what I think the next phase looks like."

>

You: "Option one: we continue with the current approach and start Phase 2 — tighter macro targets based on your new body composition, more variety in recipes, and we introduce some performance-oriented meal timing around your training. This is the aggressive path if you want to keep pushing toward [their stated long-term goal]."

>

You: "Option two: we move to a maintenance plan. Lighter touch — I build monthly plans instead of weekly, and we check in every 6 weeks instead of monthly. This is for clients who've built strong habits and want a safety net without the full coaching intensity. Lower investment, too — $[X]/month instead of $[Y]."

>

You: "Which one feels right for where you are?"

If they want to cancel: "I respect that. Before you go, let me build you a 30-day transition plan — a self-sustaining plan you can follow independently. And just know: if you want to come back in 3 months or 6 months, your profile, your preferences, and all your progress data are saved. No re-onboarding. We'd pick up right where you left off."

Script 15: Asking for Referrals After a Win

Context: A client has just hit a major milestone — weight goal reached, a PR in the gym, a visible transformation, or a positive health marker from their doctor. This is the highest-conversion moment for referral requests. **The Script:**

You: "I have to tell you — what you've accomplished is genuinely impressive. Going from [starting point] to [current result] in [timeframe] takes real consistency. That wasn't the plan doing the work — that was you doing the work."

>

Client: "Thanks. I really couldn't have done it without the meal plans."

>

You: "That means a lot. And actually, that's something I want to ask you about. I have a couple of openings for new nutrition clients next month. Do you know anyone — a friend, training partner, someone at work, maybe someone in your running group — who's been struggling with their nutrition or wanting to get their diet on track?"

>

You: "Having an accountability partner going through the same process actually makes it easier for both of you. And honestly, your recommendation carries more weight than any post I could make on social media."

>

Client: "Actually, my friend [Name] has been asking me what I've been doing differently."

>

You: "Perfect. Would you be comfortable making an introduction? I can send you a message you can forward to them — something simple that explains what I do and offers a free consultation. And if they sign up, I'll add an extra week to your plan on me as a thank you."

Part 3: Enterprise & Institutional Conversations (Scripts 16-25)

Script 16: Gym/Studio Owner Pitch for Nutrition Program

Context: You are approaching a gym or studio owner about implementing a nutrition coaching program within their facility. This is a B2B conversation — you're not selling a meal plan, you're selling a revenue stream. **Why this conversation matters at scale:** A single gym partnership can generate 20-50 nutrition clients in a quarter. The gym owner cares about member retention, additional revenue per member, and differentiation from competing facilities. Position your nutrition program as a solution to all three. **The Script:**

You: "Thanks for taking the time. I want to show you something that could add a meaningful revenue stream to your facility without adding headcount or overhead."

>

Owner: "I'm listening."

>

You: "Here's the problem I see in most gyms: members come in, they train hard, they don't see results fast enough, and they cancel. The average gym loses 30-40% of its members every year. The number one reason people cancel isn't that they don't like the gym — it's that they're not seeing results. And the number one reason they're not seeing results is nutrition."

>

You: "What I'm proposing is a white-label nutrition coaching program embedded in your facility. Here's how it works: your trainers offer customized meal plans to their clients through a professional platform called EvoFit Meals. The plans are personalized to each client's goals, preferences, and dietary restrictions. The platform handles the heavy lifting — recipe selection, macro calculations, grocery lists — so your trainers can deliver a premium service without needing a nutrition degree."

>

You: "The revenue model is simple. Each nutrition client pays $[X]/month. You keep [X]%, I keep [X]%, and the trainer delivering the plan gets [X]%. On a base of 100 members, if even 30% add nutrition services, that's [X] clients at $[X]/month — $[X]/month in additional revenue for your business alone. And here's the multiplier: members who get both training AND nutrition coaching have a 40-60% higher retention rate. They stay longer, they refer more, and they upgrade to premium packages."

Script 17: Staff Nutrition Coaching Training Scripts

Context: You have been hired by a gym or studio to train their coaching staff on selling and delivering nutrition services. This is a training session, not a sales conversation. Your audience is 5-15 personal trainers who may be skeptical, nervous, or unfamiliar with nutrition coaching. **The Training Script (60-minute session outline): Opening (5 minutes):**

YOU

"We're going to spend the next hour turning nutrition into a revenue skill for every one of you. By the end of this session, you'll know how to bring up nutrition with your clients without being salesy, how to handle the three objections you'll hear most often, and how to deliver a professional meal plan in under 30 minutes using the platform."

Part 1: Why Nutrition Is Your Responsibility (10 minutes):

YOU

"Every single one of your training clients goes home and eats. What they eat determines 60-70% of whether they see results from what you do with them in the gym. Right now, you're influencing 30% of their outcome. Nutrition coaching doesn't add to your workload — it completes it. And it adds $75-200/month per client to your income."

>

YOU

"The number one thing trainers tell me is 'I don't feel qualified to do nutrition coaching.' Here's the truth: you're not prescribing medical diets. You're building meal plans for general fitness goals. If you can calculate macros, select appropriate recipes, and check in with a client weekly, you can deliver this service. The platform does the heavy lifting on the technical side."

Part 2: The Conversation Framework (15 minutes):

YOU

"Here's how you bring it up. Wait for a natural moment — a plateau, a food question, a progress review. Then use this three-sentence framework:"

>

YOU

"Sentence 1: Name the gap. 'Your training is on point, but your nutrition isn't supporting the work you're putting in.'"

>

YOU

"Sentence 2: Offer the solution. 'I've started offering customized meal plans that sync with your training program. Full recipes, shopping lists, macro breakdowns — all built around your life.'"

Script 18: Investor Conversations About Nutrition Revenue Stream

Context: You are presenting to an investor, business partner, or advisory board member about the financial opportunity of adding nutrition services to a fitness business. This is a numbers conversation, not a wellness conversation. **The Script:**

You: "I want to walk you through the unit economics of adding nutrition services to our existing training model."

>

You: "Currently, our average revenue per member is $[X]/month from training services alone. The industry average for nutrition add-on adoption is 25-35% of existing members. At our current member base of [X], that's [X] potential nutrition clients."

>

You: "The nutrition service is priced at $[X]/month per client. Our cost to deliver is primarily coach time — approximately 1.5 hours per client per month at a coach cost of $[X]/hour. That gives us a per-client margin of $[X]/month, or [X]%."

>

You: "At 25% adoption, this adds $[X]/month to our topline — $[X] annually. At 35%, it's $[X] annually. The platform cost is $[X]/month for our tier, which covers unlimited plans and clients. There is no inventory, no food cost, no equipment. It's pure service revenue with a gross margin above 70%."

>

You: "The strategic value goes beyond the direct revenue. Members who use nutrition coaching alongside training retain at a rate of [X]% versus [X]% for training-only members. That improved retention alone represents $[X] in preserved annual revenue. Combined with the direct nutrition revenue, the total impact is $[X] in Year 1."

>

You: "The implementation cost is minimal: platform subscription, a 2-hour staff training session, and the creation of marketing materials. We project breakeven within 45 days of launch. I'm recommending we approve this initiative and target a launch date of [date]."

Script 19: Franchise Nutrition Model Pitch

Context: You are pitching a standardized nutrition coaching model to a franchise group — multiple gym locations under one brand. The buyer cares about consistency, scalability, and brand compliance across locations. **The Script:**

You: "I've built a nutrition coaching model specifically designed for multi-location franchise operations. Let me walk you through why this matters and how it works."

>

You: "Your biggest challenge with nutrition services across [X] locations is consistency. If Location A delivers a great experience and Location B delivers a mediocre one, your brand takes the hit. The model I've built solves this with three layers."

>

You: "Layer one: standardized onboarding. Every location uses the same dietary questionnaire, food preference survey, and allergy disclosure form. The client experience is identical whether they walk into your downtown flagship or your suburban location."

>

You: "Layer two: centralized meal plan generation. All plans are built through EvoFit Meals using standardized macro calculation protocols and a shared recipe library. The quality of the plan doesn't depend on which coach builds it — the system ensures consistency."

>

You: "Layer three: unified pricing and packaging. Every location offers the same three tiers at the same price points. Your marketing team creates one set of materials, your sales team follows one set of scripts. No location-by-location chaos."

>

You: "The revenue projection across [X] locations: if each location has an average of [X] members and achieves a 20% nutrition adoption rate, that's [X] total nutrition clients generating $[X]/month in system-wide nutrition revenue. That's $[X] annually — and it scales linearly with every new location you open."

Script 20: Multi-Location Nutrition Coordination

Context: You already operate nutrition services across multiple locations and need to coordinate between location managers, head coaches, and clients who move between facilities. **The Script (for location managers meeting):**

You: "Today I want to align everyone on how we're running nutrition services across all [X] locations. The goal is simple: a client walks into any of our facilities and gets the same quality nutrition experience."

>

You: "Here's the operating framework. Every nutrition client has a single profile in EvoFit Meals. Their dietary preferences, restrictions, macro targets, and plan history travel with them. If a client transfers from Location A to Location B, the new coach sees their full history and can pick up without missing a beat."

>

You: "Weekly reporting: every location manager sends me their nutrition dashboard by Friday EOD. I'm looking at four numbers: active nutrition clients, new signups this week, cancellations this week, and average adherence score. I compile these into the system-wide report that goes to ownership on Monday."

>

You: "Cross-location standards: every coach follows the same consultation framework, the same onboarding sequence, and the same check-in protocol. If a client tells me their experience at one location was different from another, that's a training failure, not a client problem. We fix it the same week."

>

You: "Questions? Good. Let's review each location's numbers."

Script 21: Corporate Wellness Contract Negotiation

Context: You are negotiating with a corporate HR director or wellness program manager to provide nutrition coaching services to their employees. The buyer cares about employee engagement, health outcomes that reduce insurance costs, and measurable ROI. **The Script:**

You: "Thanks for making time. I've put together a proposal for integrating structured nutrition coaching into your employee wellness program."

>

You: "Here's what I'm seeing in the data: companies with structured nutrition programs report 15-25% lower healthcare costs related to lifestyle diseases, 28% higher employee satisfaction with their wellness benefits, and measurable improvements in productivity and absenteeism. Nutrition isn't just a perk — it's a cost-reduction strategy."

>

You: "What I'm proposing: a tiered nutrition coaching program available to all [X] employees. Tier one is a self-service meal plan library with general plans for common goals — weight management, performance, family-friendly eating. Tier two is personalized nutrition coaching with a dedicated coach who builds custom plans and checks in monthly. Tier three is premium coaching with weekly check-ins, available for your executive team or high-performers."

>

You: "The pricing model I'd recommend is a per-employee-per-month (PEPM) rate for Tier 1 access at $[X], with Tier 2 and 3 as optional upgrades subsidized partially by the company. Based on your headcount of [X], the total annual investment at full Tier 1 adoption is $[X]. If even 10% of employees engage with Tier 2, you're looking at an additional $[X] — with an expected healthcare cost offset of $[X] based on industry benchmarks."

>

You: "I provide quarterly utilization reports, satisfaction surveys, and aggregate health outcome tracking. You'll have concrete data to present to your C-suite showing the ROI of the nutrition program. Should we discuss the contract terms?"

Script 22: Insurance Reimbursement Conversations

Context: A client or institutional buyer asks whether nutrition coaching can be covered by insurance, or you are positioning your services to be eligible for insurance reimbursement or HSA/FSA spending. **The Script:**

Client: "Can I use my insurance to pay for this?"

>

You: "Great question. The short answer depends on your specific plan, but let me explain how this works."

>

You: "Traditional health insurance typically covers medical nutrition therapy (MNT) provided by a registered dietitian for specific diagnosed conditions like diabetes, kidney disease, or eating disorders. What I provide is general nutrition coaching and meal planning for fitness and wellness goals, which falls into a different category."

>

You: "That said, there are two avenues worth exploring. First, many HSA and FSA plans now cover nutrition coaching when it's documented as preventive care. I can provide you with an itemized receipt that includes service descriptions your plan administrator may accept. Second, some corporate wellness programs have a discretionary budget for nutrition services — if your employer offers a wellness stipend, this would typically qualify."

>

You: "Here's what I'd recommend: check with your HR department about wellness benefits or stipends, and contact your HSA/FSA administrator to ask if 'personalized nutrition coaching for preventive health' is an eligible expense. I'll provide whatever documentation they need. If it's covered, great — you're essentially getting professional nutrition coaching funded by your benefits. If not, the investment is still [cost per day breakdown], which most clients find manageable."

For institutional buyers:

YOU

"If you're looking to offer nutrition coaching as an insurer-reimbursable benefit for your members or employees, I recommend we structure the program documentation around preventive care outcomes

Script 23: School/Institution Nutrition Program Pitch

Context: You are pitching a nutrition education and meal planning program to a school, university, or institutional setting. The buyer might be a school administrator, athletic director, university wellness office, or student services leader. **The Script:**

You: "I'd like to propose a structured nutrition program that addresses one of the most significant barriers to student performance — and it's not study habits or tutoring. It's what they eat."

>

You: "Research consistently shows that nutritional status directly impacts cognitive function, academic performance, mood regulation, and athletic performance. Students who eat balanced, nutrient-dense meals perform 20-30% better on cognitive tasks than those who skip meals or rely on processed convenience food. And yet most students receive zero structured guidance on how to eat for their goals."

>

You: "Here's what I'm proposing for [School/Institution Name]: a three-component nutrition program. Component one is group education — monthly workshops covering practical nutrition topics like budget-friendly meal planning, eating for exam performance, and fueling for sport. Component two is individualized meal planning for student athletes — customized plans built through EvoFit Meals that account for their sport, their training schedule, their dietary restrictions, and their budget. Component three is a campus-wide meal plan resource library with sample plans for common student goals."

>

You: "For your athletic department specifically, this is a competitive advantage. Student athletes who receive structured nutrition coaching gain more lean mass, recover faster, report fewer injuries, and perform more consistently. I've seen teams improve their strength metrics by 8-15% in a single season simply by addressing nutrition gaps."

>

You: "The program cost is $[X] per semester for the group education component, and $[X]/month per student athlete for individual coaching. For an athletic department of [X] athletes, the total investment is $[X]/semester. I'd recommend piloting with your top [2-3] revenue sports this semester and expanding based on results. Can we schedule a meeting with your athletic director to discuss implementation?"

Script 24: Celebrity/High-Profile Client Intake

Context: A high-profile client — a local celebrity, professional athlete, executive, or social media personality — is considering your nutrition coaching. They have specific needs: privacy, flexibility, premium service, and often a team of professionals they already work with. Your approach must signal that you operate at their level. **The Script:**

You: "I appreciate you considering working with me. Before we get into the details, I want to understand your world so I can build something that actually fits."

>

You: "Walk me through a typical week. Not the highlight reel — the reality. How many cities are you in? How often do you eat at home versus on the go? Who else is on your health team — personal trainer, physio, doctor, mental performance coach? I want to know who I'm coordinating with."

>

Client: [Shares their schedule and team]

>

You: "Perfect. Here's how I work with clients in your position. First, confidentiality is absolute. Your dietary information, your progress data, and even the fact that you work with me stays between us unless you explicitly say otherwise. I don't post about VIP clients on social media. I don't name-drop. Ever."

>

You: "Second, I build your nutrition around your calendar — not the other way around. If you're in three cities this week, I build plans for all three. If you have a red-carpet event Friday, I'll adjust your water and sodium timing. If you're filming for 14 hours, I'll have a plan that works around craft services and travel meals. The platform lets me build different day templates for different scenarios, and I can push updates to your plan in real time."

>

You: "Third, I coordinate with your team. If your trainer is periodizing your program, I sync your nutrition to their programming. If your doctor has specific recommendations, I build those constraints into every plan. You shouldn't have to be the translator between your health professionals — that's my

Script 25: Team Performance Review Conversations

Context: You manage a team of nutrition coaches and need to have performance review conversations about their client outcomes, retention rates, and professional development. This is an internal management script, not a client-facing one. **The Script (for a coach who is underperforming on retention):**

You: "Let's talk about your numbers this quarter. I want to start with what's going well and then dig into where I think we can improve."

>

You: "Your client satisfaction scores are strong — 4.2 out of 5 on average. Clients like working with you. Your plan quality is solid, and you're responsive to messages. Those are real strengths."

>

You: "Where I'm seeing a gap is retention. Your average client tenure is [X] months versus the team average of [Y] months. That means you're losing clients earlier than your peers, which costs us in acquisition spend and lost revenue. Let's figure out why."

>

You: "I've reviewed your client notes and I think I see the pattern. You're doing great initial onboarding and your first-month plans are excellent. But your check-in frequency drops after month two. Your Week 4 one-month conversations are happening, but your Week 8 progress reviews are inconsistent. Clients are drifting between month two and month three — which is exactly when the boredom wall hits and they need the most proactive support."

>

You: "Here's what I want you to do for the next 60 days: follow the adherence protocol to the letter. Every touchpoint, every check-in, every proactive recipe swap at Week 3. I want you tracking your adherence scores in EvoFit Meals for every client and flagging anyone who drops below a 3 to me immediately. Let's meet bi-weekly to review your client list and catch at-risk clients before they cancel."

>

You: "The goal isn't to micromanage you — it's to build the habit of proactive retention so it becomes

Quick Reference Card

Save this to your phone. One-line reframes for when you're mid-conversation and need a fast pivot. #Objection / ScenarioOne-Line Reframe 1"I can meal prep myself""Recipes aren't the problem — what happens in week three is. I build the system that survives week three." 2"Diets don't work for me""You're right — diets don't work. That's why this isn't a diet. It's a framework built around your actual life." 3"I already know what to eat""Everyone knows. The gap between knowing and doing is where nutrition coaching lives." 4"Too expensive on top of training""You're paying full price for 30% of the results. Nutrition unlocks the other 70%." 5"My family won't eat that""Same dinner table, same food — just portioned for your goals. No separate meals." 6"I travel too much""A plan that only works in your kitchen isn't a plan. I build systems that travel with you." 7"I'll start Monday""There's no perfect Monday. The best plan starts in the middle of the mess." 8"Too many restrictions""Your restrictions aren't a problem — they're the blueprint. The system filters before I start." 9Upselling training clients"You're investing in the 30%. Nutrition completes the equation." 10Premium pricing close"Basic services hand you a PDF. I build a living system that evolves with you." 11Challenge enrollment"Group accountability changes the game. This isn't solo — it's a team effort." 12Free consult to paid"The data is clear. The only question is whether you want to fix it." 13"Let me talk to my spouse""Family-friendly meals, cost per day less than coffee, results that make training pay off." 14Renewal conversation"Phase 2 is where the real acceleration happens. The foundation is built — now we optimize." 15Referral after a win"Your recommendation carries more weight than any post I could make." 16Gym owner pitch"A revenue stream with 70%+ margins, zero inventory, and 40% better member retention." 17Staff training"Nutrition completes the coaching equation. This is the other half of your income potential." 18Investor pitch"25% adoption adds $X annually with gross margins above 70%." 19Franchise model"Standardized delivery, consistent client experience, linear scaling with new locations." 20Multi-location coordination"One client profile, any location, same quality. That's the standard." 21Corporate wellness"Nutrition isn't a perk — it's a cost-reduction strategy with measurable ROI." 22Insurance reimbursement"Check HSA/FSA eligibility and employer wellness stipends — many cover nutrition coaching." 23School/institution"Students who eat well perform 20-30% better on cognitive tasks. This is academic infrastructure." 24Celebrity/VIP intake"Confidentiality, calendar-first planning, and team coordination. Built for your life, not mine." 25Team performance review"Your plan quality is strong. Let's fix the engagement cadence and the numbers follow."

Team Distribution Guide

For gym owners and nutrition program directors: distribute this guide strategically based on role.
