90-Day Nutrition Adherence Protocol

A Week-by-Week System to Keep Clients Following Their Meal Plans Past the Drop-Off Window

EvoFit Meals

A Week-by-Week System to Keep Clients Following Their Meal Plans Past the Drop-Off Window

The Adherence Framework

Training adherence and nutrition adherence are two completely different problems. When a client skips a workout, they know they skipped it. When a client drifts off their meal plan, they barely notice until the results stall. There is no trainer standing next to them at the kitchen counter. There is no gym buddy texting "where are you?" when they open a takeout app instead of prepping lunch.

Nutrition adherence happens at home, alone, surrounded by family preferences, emotional triggers, and a lifetime of habits. That is why the drop-off rate for meal plans is higher than for training programs, and why most trainers hand over a meal plan and never hear about it again until the client complains that "nothing is working."

This protocol fixes that. It gives you a 90-day system of specific touchpoints, messages, and interventions designed for the unique challenge of keeping clients on their nutrition plans.

Why 90 days? Research consistently shows that dietary habits take 66-90 days to become automatic. Clients who follow a meal plan for 90 days are 4x more likely to maintain those habits at the 6-month mark. Your goal is to get them through those 90 days. **The Three Drop-Off Triggers:**

- ☐ **1. Week 1 Overwhelm.** The meal plan looks like a foreign language. Too many new foods, too much prep time, too many decisions. They feel like they have to change everything at once. Result: they abandon the plan entirely by Day 5 and go back to what they know.
- ☐ **2. Week 3 Boredom.** The initial motivation has faded. They have eaten the same chicken-and-rice meal seven times. They are tired of cooking. The novelty of having a plan is gone, and the results have not arrived yet. Result: they start "improvising" meals that drift further and further from the plan.
- ☐ **3. Month 2 Plateau.** The early wins (water weight, bloating reduction, energy boost) have leveled off. The scale is not moving. They start questioning whether the plan is working. Result: they either quit quietly or ask to "try something different" — which usually means a fad diet they saw online.

Every phase of this protocol is designed to pre-empt these triggers before they cause a drop-off.

How to Use This Protocol

Each phase has:

- ☐ **Goal:** What you are trying to achieve
- ☐ **Weekly breakdown:** Specific actions, messages, and check-ins
- ☐ **Templates:** Copy-paste messages you can send from your EvoFit Meals dashboard
- ☐ **Red Flags:** Warning signs that adherence is slipping
- ☐ **Intervention scripts:** Exactly what to say when you spot trouble

Time investment: roughly 10-15 minutes per client per week. That is the cost of a client who actually gets results, renews, and refers.

Phase 1: Foundation (Weeks 1-2)

Goal: Remove overwhelm and build one successful nutrition habit before adding complexity.

Week 1

Day 1 (Plan Delivery): *Touchpoint:* Send a welcome message within 1 hour of delivering their meal plan. Do not just hand them the plan and disappear.

> YOU
> "Hey [Name]! Your meal plan is live in your EvoFit Meals dashboard. Before you look at the full plan, I want you to focus on ONE thing this week: nailing your breakfasts. That's it. Don't worry about perfecting every meal. If you can get your morning meal on track for 5 out of 7 days, we're winning. I'll check in Wednesday to see how it's going."

Why one meal? Because telling someone to change breakfast, lunch, dinner, and snacks simultaneously is a recipe for failure. One anchor meal builds confidence. Confidence builds momentum. Momentum builds adherence. *Touchpoint:* Send a prep reminder Sunday evening (or the day before their meal prep day).

> YOU
> "Quick reminder — if you can spend 20-30 minutes tonight prepping your breakfasts for the week, the rest takes care of itself. Your plan has a prep-friendly option for every breakfast. Check the recipe details in your dashboard for batch-prep tips."

Day 3 (Mid-week check-in): *Touchpoint:* Send a brief check-in. Keep it specific.

> YOU
> "Hey [Name], how's the breakfast routine going? Have you tried the [specific recipe from their plan] yet? That one's a client favorite. Let me know if anything feels off — portions too big, ingredients you can't find, prep taking too long. I can swap things around for you in two minutes."

Day 5-7: *Touchpoint:* End-of-week acknowledgment. Reference something specific.

> YOU
> "[Name], you made it through Week 1. That's the hardest week for everyone — the plan is new, the grocery list is different, and the kitchen routine hasn't clicked yet. If you hit your breakfast target most days, you're ahead of 80% of people who start a meal plan. How did it feel?"

Red Flags:

- ☐ They do not open their meal plan in the dashboard within 48 hours
- ☐ They message you asking if they "really have to eat all of this" (overwhelm signal)
- ☐ They do not respond to your Day 3 check-in

Intervention: If they seem overwhelmed, simplify immediately. Open their plan in EvoFit Meals and swap complex recipes for simpler alternatives.

Phase 2: Adaptation (Weeks 3-4)

Goal: Break through the boredom wall. Introduce variety before monotony kills motivation.

Week 3

The Boredom Wall:

This is where most meal plans die. The excitement of something new is gone. They have eaten the same meals for two weeks. The results are not dramatic enough to sustain motivation on their own. You need to inject freshness.

Touchpoint: Proactive variety message. Do not wait for them to complain.

> **YOU**
> "Hey [Name], I just refreshed a few meals on your plan — swapped in some new recipes to keep things interesting. Check out [specific recipe name] for dinner this week. It's one of the most popular recipes in the system. Same macros, completely different flavor profile. Let me know what you think."

Use the plan adjustment feature in EvoFit Meals to rotate 2-3 meals. This takes under a minute but signals that you are actively managing their experience.

Touchpoint: Reduce check-in frequency from mid-week to twice weekly. You are building their independence, not dependence on your messages.

> **YOU**
> "Quick check-in — how's adherence feeling this week? Rate yourself 1-5 (1 = totally off plan, 5 = nailing it). No judgment either way. I just want to know where we stand so I can help."

Red Flags:

- ☐ They rate themselves 1-2 on the adherence scale
- ☐ They mention eating out frequently ("I've been so busy, just grabbing food on the go")
- ☐ They stop logging meals or viewing the plan in the dashboard

Intervention for low adherence:

> **YOU**
> "Thanks for being honest. A 2 is not failure — it's information. Let's figure out what's tripping you up. Is it the cooking time, the ingredients, or just not feeling excited about the meals? I can fix any of those. The worst thing we can do is keep a plan you're not following."

Week 4

The One-Month Conversation: *Touchpoint:* Schedule a 5-10 minute call or in-app voice note. This is not a text — it is a conversation.

Cover three questions:

- ☐ **1.** "What meals are you actually enjoying?"

Phase 3: Results Phase (Weeks 5-8)

Goal: Make progress visible and undeniable. Connect their daily meal choices to measurable outcomes.

Weeks 5-6

Measurement Checkpoint: *Touchpoint:* Request progress data. Be specific about what you want.

"[Name], it's time for a progress check. This week, I need three things from you:

1. Current weight (same scale, same time of day as your starting weigh-in)

2. A progress photo (same lighting and angle as your starting photo — I know it's awkward, but this is the most honest measure we have)

3. Your honest answer: do your clothes fit differently?

>

Send them to me through the app whenever you're ready."

Touchpoint: Deliver the results. Even modest progress should be framed as meaningful.

"Here's what I'm seeing after 5 weeks:

- Weight: [X] → [Y] ([Z] lbs change)

- Photo comparison: [specific observation — 'visible reduction around your midsection' / 'your face is noticeably leaner']

- Your protein consistency has improved from [X]% to [Y]% of target

Phase 4: Independence Phase (Weeks 9-12)

Goal: Transition the client from plan-dependent to self-managing. Have the renewal conversation. Ask for referrals.

Weeks 9-10

Building Self-Management:

The client should now be making good nutrition decisions without checking the plan for every meal. Your job shifts from directing to coaching.

Touchpoint: Test their independence.

> YOU
>
> "[Name], I want to try something this week. For three of your meals, I want you to build them yourself using the principles from your plan — hit your protein target, keep your portions consistent, choose whole foods. Don't check the plan for those three meals. Then tell me what you ate and I'll give you feedback. I want to see if the habits are sticking."

Touchpoint: Provide feedback on their self-built meals.

"Here's what I noticed about your self-planned meals:

- Protein: [on target / a bit low — here's how to fix that]

- Portions: [solid / slightly high on carbs at dinner — easy adjustment]

- Food quality: [great choices / swap X for Y next time]

>

Overall: you're [X]% of the way to managing this on your own. That's the goal — I don't want you dependent on a plan forever. I want you to understand nutrition well enough to make smart choices at any restaurant, any grocery store, any family dinner."

The Renewal Conversation:

Do not wait until the plan expires. Have this conversation in Week 9 or 10.

"[Name], your current plan runs through [date]. I want to talk about what comes next. Based on your progress, I see two strong options:

Adherence Scoring System

Use this 1-5 scale during weekly check-ins. Ask the client to self-rate, and track it over time in your notes.

ScoreMeaningYour Response **5**Followed the plan 90-100% this week"Crushing it. Keep going." **4**Followed 70-89% — minor deviations"Strong week. Those small deviations are normal and fine." **3**Followed 50-69% — noticeable gaps"Decent foundation. Let's identify the gap — is it one specific meal or a time-of-day thing?" **2**Followed 25-49% — significant drift"Thanks for being honest. Let's simplify. What CAN you commit to this week?" **1**Followed less than 25%"No judgment. Something's off and I want to fix it. Can we talk for 5 minutes this week?" **Tracking pattern:** If the score trends downward for two consecutive weeks, intervene immediately. Do not wait for a third week. **Score 3 or below for three consecutive weeks:** Schedule a plan rebuild conversation. The current plan is not working for their life, and no amount of motivation will fix a structural problem.

Quick Reference: 90-Day Timeline
