Macro Counting Made Easy

The Visual Guide Your Clients Will Actually Use

EvoFitMeals

evofitmeals.com

What Are Macros?

The three macronutrients that make up every calorie you eat.

"Macros" is short for macronutrients -- the three nutrients your body needs in large amounts. Every food you eat is made up of some combination of protein, carbohydrates, and fat. Understanding macros lets you control *what* those calories do, not just how many you eat.

Protein

4

calories per gram

Builds and repairs muscle. Highest satiety. Essential for recovery and body composition.

Carbs

4

calories per gram

Primary energy source. Fuels workouts and brain function. Stored as glycogen in muscles.

Fat

9

calories per gram

Hormone production. Vitamin absorption. Cell health. Most calorie-dense macro.

💡 Why Macros Matter More Than Calories Alone

- ✓ 1,800 cal of protein-rich food builds muscle; 1,800 cal of sugar does not
- ✓ Hitting protein targets preserves lean mass during fat loss phases
- ✓ Adequate fat intake supports testosterone, estrogen, and thyroid hormones
- ✓ Carb timing around workouts directly impacts performance and recovery
- ✓ Two people at the same calorie level get vastly different results based on macro split

How to Calculate Macros

Three steps from body stats to a personalized macro plan.

STEP 1

Calculate Basal Metabolic Rate (BMR)

Calories your body burns at complete rest. Use the Mifflin-St Jeor equation:

Men: BMR = 10 x weight(kg) + 6.25 x height(cm) - 5 x age - 5
Women: BMR = 10 x weight(kg) + 6.25 x height(cm) - 5 x age - 161

STEP 2

Determine TDEE (Total Daily Energy Expenditure)

Multiply BMR by your activity factor to get total calories burned per day:

Sedentary (desk job): BMR x 1.2
Light (1-3 days/wk): BMR x 1.375
Moderate (3-5 days/wk): BMR x 1.55
Active (6-7 days/wk): BMR x 1.725
Very Active (2x/day): BMR x 1.9

STEP 3

Set Your Macro Split

Apply your goal-based percentages (see page 4) to your TDEE. Divide protein and carb grams by 4, fat grams by 9.

Protein grams = (TDEE x protein %) / 4
Carb grams = (TDEE x carb %) / 4
Fat grams = (TDEE x fat %) / 9

👨 Male Example

30 yrs, 82 kg (180 lb), 178 cm, Moderate Activity

BMR	1,780 cal
TDEE (x 1.55)	2,759 cal
Goal: Fat Loss (-500)	2,259 cal
Protein (40%)	226g
Carbs (30%)	169g

👩 Female Example

28 yrs, 63 kg (139 lb), 165 cm, Light Activity

BMR	1,370 cal
TDEE (x 1.375)	1,884 cal
Goal: Fat Loss (-400)	1,484 cal
Protein (40%)	148g
Carbs (30%)	111g

Fat (30%)	**75g**

Fat (30%)	**49g**

Macro Splits by Goal

Choose the right ratio based on your client's primary objective.

GOAL	PROTEIN	CARBS	FAT	SPLIT	BEST FOR
Fat Loss	**40%**	30%	30%	40/30/30	Preserving muscle during deficit
Muscle Gain	30%	**40%**	30%	30/40/30	Fueling growth with surplus carbs
Maintenance	30%	35%	35%	30/35/35	Balanced long-term health
Endurance	25%	**50%**	25%	25/50/25	Runners, cyclists, triathletes
Keto	25%	5%	**70%**	5/25/70	Therapeutic or fat-adapted athletes

Fat Loss @ 1,800 cal

1,800

Protein (40%)	180g
Carbs (30%)	135g
Fat (30%)	60g

Muscle Gain @ 2,800 cal

2,800

Protein (30%)	210g
Carbs (40%)	280g
Fat (30%)	93g

Endurance @ 3,200 cal

3,200

Protein (25%)	200g
Carbs (50%)	400g
Fat (25%)	89g

💡 **Pro Tip:** These are starting points, not rigid rules. Adjust every 2-4 weeks based on progress photos, measurements, and performance. If energy drops, increase carbs by 5%. If hunger spikes, increase protein by 5%. The best split is the one your client can actually stick with.

The Hand Portion Guide

No scale? No problem. Your hand is a built-in portion tool that scales to your body size.

🖐

Palm = 1 Protein Serving
Flat palm, fingers excluded

~25g protein

Chicken breast, fish fillet, lean beef, tofu block. Thickness and area of your palm.

✊

Fist = 1 Carb Serving
Closed fist

~25g carbs

Cooked rice, pasta, potato, oats. One fist-sized portion of starchy carbs.

👍

Thumb = 1 Fat Serving
Entire thumb length

~10g fat

Butter, oil, nut butter, cheese. One thumb-sized portion of added fats.

🤲

Cupped Hand = 1 Fruit/Veg
Open cupped hand

~1 serving

Berries, chopped vegetables, fruit pieces. Fill your cupped hand for one serving.

Daily Portions by Goal (Example: 2,000 cal Fat Loss)

MEAL	PROTEIN (PALMS)	CARBS (FISTS)	FATS (THUMBS)	VEGGIES (CUPS)
Breakfast	1 palm	1 fist	1 thumb	**1 cupped hand**
Lunch	2 palms	1 fist	1 thumb	**2 cupped hands**
Snack	1 palm	1 fist	1 thumb	**1 cupped hand**
Dinner	2 palms	1 fist	1 thumb	**2 cupped hands**
Daily Total	**6 palms**	**4 fists**	**4 thumbs**	**6 cups**
Approx grams	*~150g P*	*~100g C*	*~40g F*	***unlimited***

50 Common Foods Macro Table

Per-serving macros organized by dominant macronutrient. Keep this page handy.

FOOD	SERVING	CAL	PROTEIN	CARBS	FAT
PROTEIN-DOMINANT FOODS					
Chicken Breast	4 oz (113g)	130	26g	0g	3g
Turkey Breast	4 oz (113g)	120	26g	0g	1g
Lean Ground Beef (93%)	4 oz (113g)	170	22g	0g	9g

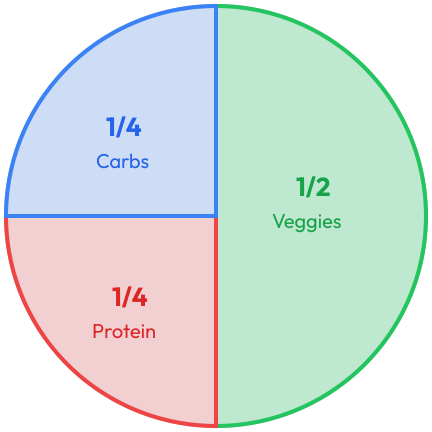
Cucumber	1/2 medium (100g)	15	1g	4g	0g
Cauliflower	1 cup (107g)	27	2g	5g	0g
Green Beans	1 cup (125g)	34	2g	8g	0g
Mixed Greens Salad	2 cups (85g)	18	2g	3g	0g

Tracking Without an App

The plate method, pre-portioned prep, and visual templates your clients can use immediately.



1/2 Plate: Vegetables
Non-starchy veggies. Broccoli, spinach, peppers, salad greens. Nearly unlimited -- high volume, low calories, loaded with fiber and micronutrients.

1/4 Plate: Protein
Lean meat, fish, eggs, tofu. About 1-2 palm-sized portions. Prioritize this quarter first to hit protein targets.

1/4 Plate: Carbs
Rice, potato, pasta, bread. About 1 fist-sized portion. Increase this quarter on training days, reduce on rest days.

📦 Pre-Portioned Meal Prep

- Cook proteins in bulk (Sunday batch cook)
- Pre-portion into containers with a scale once
- Pair each protein with a carb and vegetable
- Label containers with macro totals
- Stack 4-5 days in the fridge at once
- Grab-and-go eliminates daily decisions

📋 The Mental Checklist Method

- Each meal: "Do I have a protein source?"
- Each meal: "Do I have vegetables?"
- Each meal: "Is my carb portion fist-sized?"
- Each meal: "Is my fat portion thumb-sized?"
- End of day: tally palm/fist/thumb counts
- Adjust tomorrow if today was off-target

Sample Day Template (Fat Loss, ~1,800 cal)

Breakfast	3 egg whites + 1 whole egg, 1/2 cup oats, 1 cup berries	P 22g | C 35g | F 8g
Lunch	6 oz chicken breast, 1 cup rice, 2 cups mixed greens, 1 tbsp olive oil	P 42g | C 50g | F 16g
Snack	1 scoop whey protein, 1 medium apple, 1 tbsp almond butter	P 28g | C 30g | F 10g
Dinner	5 oz salmon, 1 medium sweet potato, 2 cups broccoli	P 32g | C 32g | F 14g
TOTAL	~1,790 calories	P 124g | C 147g | F 48g
